

The nap

Sleeps when empty. Grows for a crowd. You pay for a sip.

Copy the Voice-over block. Timed lines are for editing. No storyteller kid in the picture — voice only.

VOICE-OVER (COPY THIS)

Welcome back to Cloud Town, high up in the sky! This is Episode 13. Aurora can stay wide awake. That is provisioned. Or Aurora can nap. That is Aurora Serverless. When the lemonade stand is empty, the notebook sleeps. You do not pay for a whole pitcher. You pay for a sip. When a crowd comes, it wakes and grows. ACU is how wide the pages get. Lulu pops in for one job, then she is gone. This notebook stays. It just takes a nap. Still MySQL. Still PostgreSQL. Same pile of pages. Now you know Aurora Serverless!

TIMED LINES

0:00.10 – 0:04.38	Welcome back to Cloud Town, high up in the sky!
0:04.38 – 0:07.05	This is Episode 13.
0:07.05 – 0:10.03	Aurora can stay wide awake.
0:10.03 – 0:12.29	That is provisioned.
0:12.29 – 0:14.78	Or Aurora can nap.
0:14.78 – 0:17.66	That is Aurora Serverless.
0:17.66 – 0:22.50	When the lemonade stand is empty, the notebook sleeps.
0:22.50 – 0:25.63	You do not pay for a whole pitcher.
0:25.63 – 0:27.93	You pay for a sip.
0:27.93 – 0:32.18	When a crowd comes, it wakes and grows.
0:32.18 – 0:35.68	ACU is how wide the pages get.
0:35.68 – 0:40.24	Lulu pops in for one job, then she is gone.
0:40.24 – 0:42.66	This notebook stays.
0:42.66 – 0:44.95	It just takes a nap.
0:44.95 – 0:47.46	Still MySQL.
0:47.46 – 0:50.14	Still PostgreSQL.
0:50.14 – 0:52.84	Same pile of pages.
0:52.84 – 1:00.00	Now you know Aurora Serverless!

CHAPTERS

0:00.00 – 0:17.66	Awake or nap
0:17.66 – 0:22.50	Empty stand
0:22.50 – 0:27.93	A sip
0:27.93 – 0:35.68	Grows
0:35.68 – 0:44.95	Not Lulu

0:44.95 – 1:00.00 Same pages

NEIGHBORS (KID WORD = AWS)

Wide awake = Provisioned Aurora

Stays on all day

Aurora can stay wide awake. That is provisioned.

Provisioned Aurora uses a chosen instance size 24/7. Best when the load is steady and high. You pay for the pitcher even if nobody drinks.

The nap = Aurora Serverless v2

Sleeps, then wakes

When the lemonade stand is empty, the notebook sleeps. It stays. It just takes a nap.

Aurora Serverless v2 scales capacity with traffic and can scale toward zero when idle. Same Aurora storage. Same MySQL/PostgreSQL. Use it for spiky, quiet, or unknown loads.

A sip = Pay per ACU

Not the whole pitcher

You do not pay for a whole pitcher. You pay for a sip.

You set a min and max ACU. Billing follows capacity in use. Cheaper than provisioned when the stand is often empty. A busy all-day stand may still be cheaper provisioned.

How wide = ACU

Pages get wider

When a crowd comes, it wakes and grows. ACU is how wide the pages get.

An Aurora Capacity Unit is CPU + memory. Serverless v2 scales in fine ACU steps so the notebook grows with the line instead of jumping to a huge size.

Lulu = AWS Lambda

One job, then gone

Lulu pops in for one job, then she is gone. This notebook stays.

Lambda is a function that runs and disappears. Aurora Serverless is still a database that keeps your pages. It only naps. Do not mix them up on the exam.

QUIZ

1. What stays wide awake all day?

Choices: Wide awake · The nap · Lulu

Answer: Wide awake (Provisioned Aurora)

2. What naps when the lemonade stand is empty?

Choices: The nap · Lulu · Wide awake

Answer: The nap (Aurora Serverless v2)

3. What is a sip instead of a whole pitcher?

Choices: A sip · How wide · Lulu

Answer: A sip (Pay per ACU)

4. What is how wide the pages get when a crowd comes?

Choices: How wide · Lulu · Wide awake

Answer: How wide (ACU)

RECAP

Awake or nap. Empty stand. A sip. Grows for a crowd. Not Lulu. Same pages. Now you know Aurora Serverless.

Yes! Provisioned stays awake. Serverless naps, then grows. You pay for a sip. ACU is how wide. Lulu leaves. The notebook stays.
