

# The story vault

DocumentDB. A whole tale as one pile of pages.

## VOICE-OVER (COPY THIS)

Welcome back to Cloud Town, high up in the sky! This is Episode 17. Dot has a tidy notebook. Rows and columns. The cubbies grab by name. The story vault is different. DocumentDB keeps a whole tale as one pile of pages. Like a storybook. Name, pictures, and notes stay together. You do not split the tale into rows. You do not need the same boxes on every page. It talks like MongoDB. Eddie can read the whole story at once. If a page is missing, the tale still makes sense. Now you know the story vault! See you next time in Cloud Town, high up in the sky!

## TIMED LINES

00.10 – 04.43 Welcome back to Cloud Town, high up in the sky!  
04.43 – 07.29 This is Episode 17.  
07.29 – 09.97 Dot has a tidy notebook.  
09.97 – 12.39 Rows and columns.  
12.39 – 15.13 The cubbies grab by name.  
15.13 – 17.98 The story vault is different.  
17.98 – 23.15 DocumentDB keeps a whole tale as one pile of pages.  
23.15 – 25.35 Like a storybook.  
25.35 – 29.63 Name, pictures, and notes stay together.  
29.63 – 33.19 You do not split the tale into rows.  
33.19 – 37.41 You do not need the same boxes on every page.  
37.41 – 40.28 It talks like MongoDB.  
40.28 – 43.98 Eddie can read the whole story at once.  
43.98 – 48.56 If a page is missing, the tale still makes sense.  
48.56 – 51.48 Now you know the story vault!  
51.48 – 60.00 See you next time in Cloud Town, high up in the sky!

## NEIGHBORS (KID WORD = AWS)

**Story vault / storybook pile = Amazon DocumentDB**

A whole tale as one pile of pages. Not rows. Not cubbies.

**Talks like Mongo = MongoDB compatible**

Eddie can speak to it the Mongo way.

**Same boxes not required = Flexible schema**

You do not need the same boxes on every page.
